Lab Report[CA] | Page 1 of 5

Program: <u>1.</u> Calculate the sum of the series $1^2+3^2+5^2+.....+(2n+1)^2$

```
#include<bits/stdc++.h>
using namespace std;
int main()
{
   int n, i, s;
   cin >> n;
   s = 0;
   for (i = 1; i <= n; i = i + 2) {
        s = s + i * i;
   }
   cout << s << "\n";
   return 0;
}</pre>
```

Input:

10

Output:

165

Program: <u>2.</u> Write a Program to calculate the CGPA of a semester

```
#include <bits/stdc++.h>
using namespace std;
int main()
    int t, n;
    float b, c = 0, e = 0, s, g;
    string a, d;
    cout << "== CGPA Calculator ==" << "\n";</pre>
    cout << "Total Course(s) = " ;</pre>
    {
        cin >> t;
        while (t--) {
             cout << "Course Title = ";</pre>
             cin >> d ;
             cout << "Credit(s) = ";</pre>
             cin >> c;
cout << "Marks = ";</pre>
             cin >> n;
             {
                 if (n < 40)
                      a = "F", b = 0.00;
                 if (n >= 40 \&\& n <= 44)

Program: 3(i). Implement the recursive algorithm to find the factorial n

```
#include<bits/stdc++.h>
using namespace std;
int Fact (int n)
    if (n == 0)
        return 1;
    else
        return (n * Fact (n - 1));
}
int main()
    int a, n;
    cout << "n = ";
    cin >> n;
    a = Fact(n);
    cout <<"factorial("<< n <<") = "<< a <<"\n";</pre>
```

Input:

Output:

```
n = 5
factorial(5) = 120
```

Program: 3(ii). Implement the iterative algorithm to find the factorial n

```
#include<bits/stdc++.h>
using namespace std;
int main()
    int a, n, i;
    cout << "n = ";
    cin >> n;
        if (n == 0)
            cout << "factorial(" << n << ") = "
<< 1 << "\n";
        else {
            for (i = 1; i \le n; i++)
                a *= i;
    cout <<"factorial("<< n <<") = "<< a <<"\n";</pre>
    return 0;
}
```

Input:

Output:

```
n = 5
factorial(5) = 120
```

Program: 4(i). Implement the recursive algorithm to find the nth Fibonacci series

```
#include<bits/stdc++.h>
using namespace std;
int Fib (int x)
    int f;
    if (x == 1)
        return (0);
    else if (x == 2)
        return (1);
        f = Fib (x - 1) + Fib (x - 2);
    return (f);
int main()
{
    int Fib (int);
    int x, y, n;
cout << "n = ";</pre>
    cin >> n;
    for (x = 1; x \le n; x++) {
        y = Fib(x);
        cout << y << "\t";
    return 0;
```

Input:

6

Output:

```
n = 6
  1
                 3
                      5
        1
             2
```

Program: 4(ii). Implement the iterative algorithm to find the nth Fibonacci series

```
#include<bits/stdc++.h>
using namespace std;
int main()
{
    int n, i, a = 0, b = 1, s = 0;
    cout << "n = ";
    cin >> n;
    cout << a << "\t" << b << "\t";
    for (i = 2; i < n; ++i) {
        s = a + b;
        a = b;
        b = s;
        cout << s << "\t";
    return 0;
```

Input:

6

Output:

```
n = 6
                            5
           1
                 2
                      3
```

Program: <u>5.</u> Implement the Towers of Hanoi algorithm

```
#include<bits/stdc++.h>
using namespace std;
void TH (int, char, char, char);
int main()
     int n;
     cout << "Number of disk = ";</pre>
     cin >> n;
     TH (n, 'A', 'C', 'B');
void TH (int n, char x, char y, char z)
     if (n > 0) {
         TH (n - 1, x, z, y);
cout << x << " => " << y << "\n";
TH (n - 1, z, y, x);
     }
}
```

Input:

3

Output:

```
Number of disk = 3
A => C
A \Rightarrow B
C \Rightarrow B
A => C
B \Rightarrow A
B \Rightarrow C
A => C
```

Program: 6(i). Implement the Pizza Cutting algorithm by using recursive algorithm

```
#include<bits/stdc++.h>
using namespace std;
int pizza (int n)
    if (n == 1)
       return 2;
    else if (n > 1)
        return pizza (n - 1) + n;
int main()
    int n;
    cout << "Cut = ";
    cin >> n;
    cout << "Piece = " << pizza (n) << "\n";</pre>
    return 0;
```

Input:

Output:

```
Cut = 3
Piece = 7
```

Program: 6(ii). Implement the Pizza Cutting algorithm by using iterative algorithm

```
#include<bits/stdc++.h>
using namespace std;
int main()
    int n, s;
    cout << "Cut = ";
    cin >> n;
    if (n == 1)
         cout << "2" << "\n";
    else if (n > 1) {
         s = (1 + n * (n + 1) / 2);
cout << "Piece = " << s << "\n";
    return 0;
}
```

Input:

3

Output:

Cut = 3Piece = 7

Program: 7(i). Calculate the series $m^2+(m+1)^2+....+(n-1)^2+n^2$ by using going-up recursive algorithm

```
#include<bits/stdc++.h>
using namespace std;
int sqsum (int m, int n)
    if (m < n) {
        return (m * m + sqsum (m + 1, n));
    else
        return (m * m);
}
int main()
    int a, m, n;
    cout << "Values of m & n = ";</pre>
    cin >> m >> n;
    a = sqsum (m, n);
    cout << "Sum = " << a << "\n";
    return 0;
```

Input:

4 8

Output:

```
Values of m \& n = 4 8
Sum = 190
```

Lab Report[CA] Page 4 of 5

```
Program: 7(ii). Calculate the series

m²+(m+1)²+.....+(n-1)²+n² by using going-down

recursive algorithm

#include<bits/stdc++.h>
using namespace std;

int sqsum (int m_int n)
```

```
using namespace std;
int sqsum (int m, int n)
{
    if (m < n) {
        return (sqsum (m, n - 1) + n * n);
    }
    else
        return (n * n);
}
int main()
{
    int a, m, n;
    cout << "Values of m & n = ";
    cin >> m >> n;
    a = sqsum (m, n);
    cout << "Sum = " << a << "\n";
    return 0;
}</pre>
```

Input:

4 8

Output:

Values of m & n = 4.8Sum = 190

Program: 7(iii). Calculate the series $m^2+(m+1)^2+.....+(n-1)^2+n^2$ by using *splitting-halves* recursive algorithm

```
#include<bits/stdc++.h>
using namespace std;

int sqsum (int m, int n)
{
    int mid = (m + n) / 2;
    if (m == n) {
        return (m * m);
    }
    else
        return(sqsum (m, mid)+sqsum (mid+1,n));
}

int main()
{
    int a, m, n;
    cout << "Values of m & n = ";
    cin >> m >> n;
    a = sqsum (m, n);
    cout << "Sum = " << a << "\n";
    return 0;
}</pre>
```

Input:

4 8

Output:

Values of m & n = 4 8 Sum = 190
